

Aircraft Structural Best Practices Sharing Webex

April 14, 2020 2:00 pm

Topics:

Welcome and sign in using chat if possible – attendees included Steve Conway, Tal Loos, Kristy Vest, Paul O’Dea, Randy Rynders, Jason Wisham, and Terry Bragg

GVTC On-going Training and Office Hours – Steve explained that the GVTC team had been conducting ongoing training sessions for Black Board and that they would continue to do so in coming weeks. Steve will continue to send these schedules via email each week when they come out.

Best Practices – Tal opened the sharing session by explaining that Savannah was suing BB Collaborate for lecture and basic classroom activities with the students. It was easy to set up and since most students were using phones it worked well on those. The 1010 and 1020 courses work best so far. The 1030 course has too much lab so that is being pushed to summer. Kristy and the rest of the Central GA team were using Black Board for some activities but were wondering about labs. The group agreed that labs would have to be pushed to summer and right now June seems workable. Future co-horts and scheduling other lab courses are being put on hold until current students are finished up. Many students would be getting I grades for lab courses this term. Dual Enrollment students are proving to be

challenging as well. Each district must weigh in on grading and returning to campuses for any lab work.
