

Construction Management Program Curriculum Development Summary Points October 3-4, 2019

Attendees:

Daniel Krautheimer, Savannah; Donny Holmes, GA Northwestern; Ifiok Immanuel, Gwinnett; Chris Sirmans, Gwinnett; Jeffry Roberson, Ogeechee; Mike Howard, TCSG

Welcome and Overview:

Steve Conway welcomed the whole group and explained the charges for each work group. The group then convened in a break out room. Steve explained that lab 3 hours should be removed unless they are in internship. As well credits and overall contact hours should diminish as part of the process. English and math can remain in the diploma if the group provides a justification.

Construction Management Program Curriculum Development Summary

The work group reviewed the curriculum content and added CARP 1070 and CCMN 1050 courses to the Commercial Construction Management degree program. A new Construction Accounting course will be developed as an option to the ACCT 1100 Financial Accounting I course. CCMN 1040 Construction Safety was added to the NCCER Construction Management Commercial Specialization.

The work group chose to replace ENGL 1010 Fundamentals of English with the new Technical Communications as a required Basic Skills course.

The work group then looked at the existing TCCs to make sure they were stackable and if any credits were changing.

Conclusion and Next Steps:

Mike stated he would make final edits to the program and course proposals document and send back to the work group for final verification. Proposed changes will be sent to statewide faculty to have an opportunity for feedback. Once proposal has been reviewed and final edits completed, Mike would create additional documents required to be placed in the president's dropbox to be reviewed at an upcoming Presidents Council meeting. Mike would keep the work group apprised of the progress.
