

## **Diesel Tech Best Practices Sharing Webex**

**Sept. 3, 2020 2:00 pm**

Participants: Steve Conway, Sonya Wilson, Taylor Smith, Willie Walker, Elliott Pittman, Jeff Wyatt, Brylee Spires, and Andy Lindman.

### Topics:

Welcome and TCSG Updates - Steve welcomed all to the meeting. Steve explained that since June the system office has done a slow reopening for staff with most folks now being in the office 2 days a week but also spread out over which days. The state board operations have also resumed though part virtually. Presidents and VPs continue to have weekly webex meetings.

Things Working Well – Elliott stated that his college is doing about 50% on line instruction and about 50% in the lab. He did use a large motor with a student for a project in the summer and that did not go well because there was not enough time to get it back together. He suggested using some of a motor or a very small, simple one. The Get Ahead modules are also working well on line for him.

Cleaning at Gwinnett is handled by the custodial staff except labs where students handle their areas. Gwinnett limits class size to no more than 12 to ensure proper spacing.

Albany reported that their student screening process each day is doing a great job of ensuring no sick folks make it onto campus. They have had no COVID issues since returning to campus.

Elliot asked about using Electude for on line work and Gwinnett reported that they use it for general auto courses but not diesel.

The meeting adjourned at 2:30 pm.
